

OBJECTIVES

1. Discuss the prevalence for psychiatric disorders in the general population.
2. Identify risk factors for psychiatric illnesses frequently seen in primary care.
3. Discuss assessment parameters for identifying psychiatric conditions in the primary care client.
4. Discuss signs and symptoms of emotional disorders that may be exhibited in the primary care.
5. Outline key points in performing a suicide assessment in the client who complains of symptoms of setting.
6. Identify adverse drug reactions that are frequently seen in commonly prescribed psychotropic medications.
7. Discuss nursing interventions for managing the psychiatric client in primary care.
8. Psychiatric Issues in Pregnancy.
9. Identify parameters for referring the client with psychiatric symptoms to a mental health specialist.
